

What's inside a Computer?

by alex

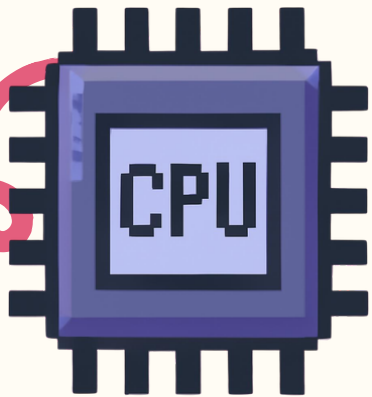

case

a computer case is where you store all the parts for your computer.

MOTHERBOARD

A motherboard is the main circuit board that connects all the computer's components.

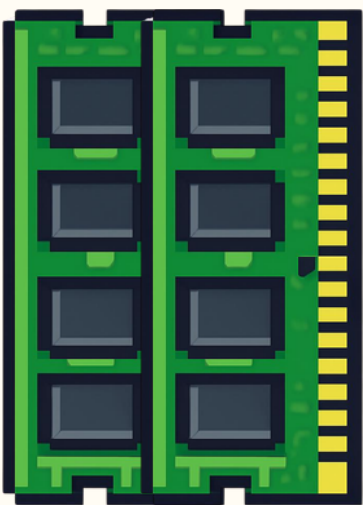

CPU

A CPU (Central Processing Unit) is the "brain" of a computer. It processes instructions, performs calculations, and controls what the computer does.

psu

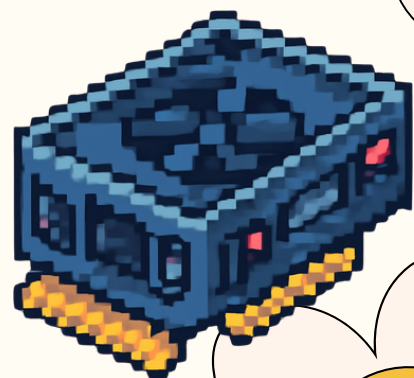

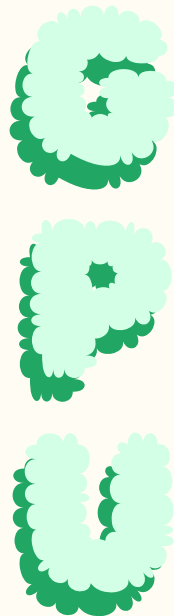

A PSU (Power Supply Unit) provides power to all the computer's components.

RAM

RAM is the computer's short-term memory used to store data while programs are running.

GPU processes graphics, images, and videos for the computer.

MONITOR

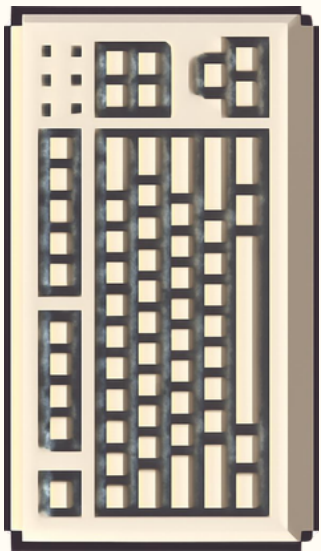

Monitor displays images, videos, and text from the computer.

MOUSE

Mouse is an input device used to control the pointer and select things.

KEYBOARD

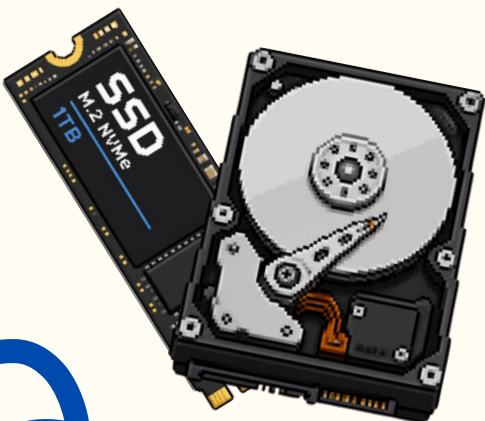

Keyboard is an input device used to type letters, numbers, and commands.

optical drive

Optical drive uses a laser to read and write data on discs like CDs, DVDs, and Blu-rays.

HDD/SSD

HDD: Stores data on spinning disks and is usually cheaper.
SSD: Stores data on memory chips, making it faster, quieter, and more durable.

NIC

NIC connects a computer to a network using wired (Ethernet) or wireless (Wi-Fi) connections.
