

COMPUTER HARDWARE 101

WHAT MAKES A COMPUTER? - BY ELLA C

1

CASE

The case is the computer's body. It stores the important internal parts.

2

PSU (POWER SUPPLY UNIT)

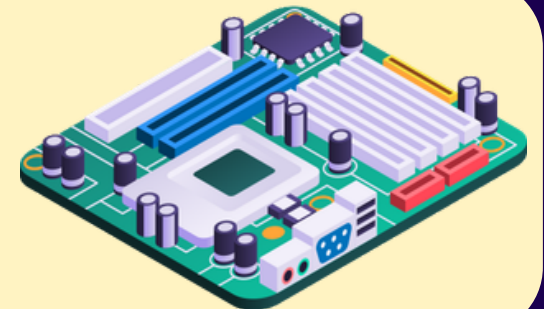

The PSU gives electricity to the computer's parts so they can work.

3

MOTHERBOARD

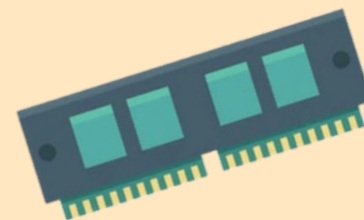

The motherboard is the computer's main road. It connects all the parts together.

4

RAM (RANDOM ACCESS MEMORY)

The RAM is the computer's short-term memory. It helps the computer remember tasks going on right now.

5

HDD/SDD

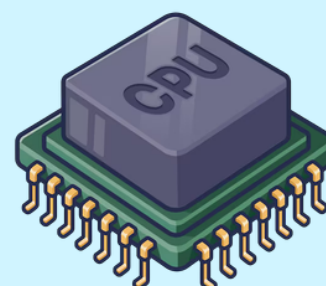

The hard disc drive (HDD) and solid state drive (SSD) are the computer's long-term storage.

6

CPU (CENTRAL PROCESSING UNIT)

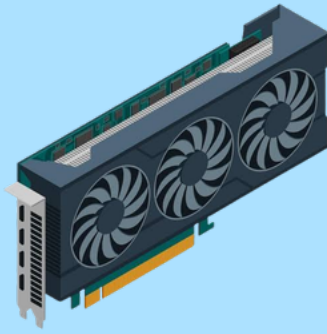

The CPU is like the computer's brain. It allows the computer to perform tasks.

7

GPU (GRAPHICS PROCESSING UNIT)

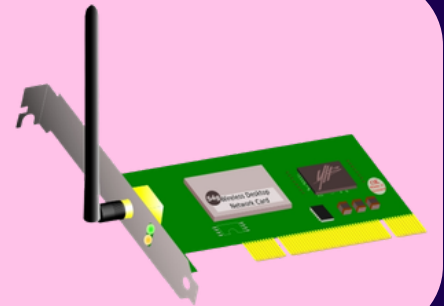

The GPU helps the computer create pictures, videos, and game graphics on the screen.

8

NIC (NETWORK INTERFACE CARD)

The NIC helps the computer connect to WiFi or a network cable.

9

MOUSE

The mouse lets you point, click, and choose things on the screen.

10

KEYBOARD

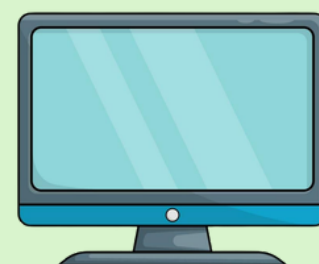

The keyboard lets you type letters, numbers, and commands into the computer.

11

MONITOR

The monitor is the computer's screen. It shows you pictures, words, videos, etc.

12

OPTICAL DRIVE

An optical drive helps the computer to read CDs and DVDs.
